

What is an ultra-microfiber?

An ultra-microfiber is a textile fiber that is thinner and more absorbent than a microfiber (1.0dtex) pad typically used with steam mops. Specifically, to be defined as an ultra-microfiber, it should be less than 0.2dtex. The Ultra-Microfiber pad by HAAN® Corporation is made of .17dtex ultra-microfibers.

How to Use Ultra-Microfiber Pads

- 1 .Please make sure that a completely dry pad is used.
- 2 .As high temperature steam passes through a pad to contact the floor to kill germs, molds, mites and to provide a certain amount of water necessary for cleaning, it is natural that the pad gradually absorbs moisture. After a certain length of time, the pad repels water and becomes damp.
- 3 .To keep the floor clean and dry, replace the pad when it is dirty.
- 4 .Only remove pad from unit when not in use and steam is not being emitted.

How to Clean and Store

1. Hand wash or machine wash the ultra-microfiber pad in cold water on the delicate cycle with a mild detergent. (Do not use a fabric softener)
2. Using a washing machine may shorten the lifespan of the pads.
3. We recommend air drying the ultra-microfiber pad for 24 hours, but they could be dried in a dryer on a low heat setting.

No Bleach

Hang Dry

Light Twist

No Iron
